199	Algal channel & banks	Exposed Bed / Bank	Medium	56.3	Assess recharge and de-silting; stabilise and re-profile the eroded bank.
201	Lake - open water	Exposed Bed / Bank	Medium	56.4	Assess recharge and de-silting; stabilise and re-profile the eroded bank.
203	Lake - open water	Exposed Bed / Bank	Medium	56.5	Assess recharge and de-silting; stabilise and re-profile the eroded bank.
225	Lake - open water	Floating Waste	Low	74.4	Deploy surface skimming and clear the shoreline catchment.
226	Lake - open water	Floating Waste	Low	77.2	Deploy surface skimming and clear the shoreline catchment.

RECOMMENDED ACTIONS

#	Priority	Finding	Recommended action	Owner
1	Critical	Both water bodies are severely degraded. The channel is choked with a dense algae and weed mat covering up to 93% of its surface; the open lake peaks at 64% algae cover and carries the highest floating-waste count in the whole programme (977 records).	Commission a water-body restoration programme as the park's top priority: mechanical weed and algae removal, de-silting, nutrient and inflow control, and aeration. Investigate the inflow - this degree of eutrophication indicates a continuing nutrient or sewage load, not a one-off.	Engineering / Horticulture
3	High	Floating waste is spread across the lake surface and concentrated along the channel; ground debris drives cleanliness to 34.9 on the channel zone.	Deploy surface skimming and net booms on both water bodies, run a shoreline clearance drive, and increase bin provision and emptying around the water edge where the waste originates.	Sanitation
4	High	328 bank-erosion records along stone-lined margins, with bare dry ground running to the water edge on both sides.	Stabilise and re-profile the eroded banks; establish a vegetated buffer strip to reduce runoff and silt entering the water.	Engineering / Horticulture
