RECOMMENDED ACTIONS

#	Priority	Finding	Recommended action	Owner
---	----------	---------	--------------------	-------

#	Priority	Finding	Recommended action	Owner
1	Critical	The lake is severely depleted and heavily eutrophic. Where open water is in view the algae share of the surface approaches 100%, and a large rocky bed with cracked, eroded bank is exposed.	Commission a water-body restoration plan: de-silting, inflow and nutrient-load control, aeration, and bank stabilisation with re-profiling. Treat as the park's top capital priority.	Engineering / Horticulture
2	High	Floating waste is detected on the water surface and plastic waste is scattered along the shoreline and exposed bed.	Deploy surface skimming or net booms at the inflow, and run a shoreline clearance drive; add bins at the bridge approach.	Sanitation
